## CR Cassette Protection

No more broken cassettes! The unique design of the Cassette Protector permits efficient and accurate weight bearing x-rays of feet (AP view). The Cassette Protector is simply placed over a cassette which is first positioned on the floor. Patients step onto the Cassette Protector with as much weight as needed to get the desired image.

- Optimal positioning for weight-bearing AP foot images, of even the heaviest patients
- The face plate is made of unbreakable polycarbonate with designs supporting 275 and 450 pounds
- Keeps patient's foot as close to the target image platform as possible to ensure high quality images with no significant magnification
- The face plate is x-ray lucent, allowing the x-rays to pass through the Cassette Protector with very little absorption or scattering
- The non-slip rubber floor grips keep the cassette protector from slipping on a hard floor
- Easy to keep clean, the Cassette Protector is made from germ-resistant nonporous polyethylene, polycarbonate, and stainless steel
- Simple, reliable and virtually indestructible
- Cassette Protectors are available for all sizes and models of film, and CR imaging systems

Item #	Size	Capacity	Price
Item 2934	10 x 12 inch or 24 x 30cm	275 lb	call
Item 2934H	10 x 12 inch or 24 x 30cm	450 lb	call
