

Medicap™ Model Comparison

The MedicaCap line of image capture devices allows you to easily save still images (all models) and full motion video (USB200). You can save from any medical imaging device that has standard video output. Images and video are saved to a convenient USB flash drive.

MedicaCap USB200
Captures Video and Images

Most powerful, versatile solution for all modalities. Ultrasound, endoscopy, arthroscopy, C-Arms, surgical microscopes, intraoral cameras, etc.

MedicaCap USB150
Captures Still Images

Excellent solution for all modalities where only still images are needed.

MedicaCap USB100
Captures Still Images

Affordable solution for most modalities where only still images are needed. (For ultrasound, the built-in monitor on the USB150 or USB200 is required.)

¹ The USB200 can easily be upgraded via an optional MedicaCapture "upgrade flash drive." Simply insert the "upgrade flash drive" and select Upgrade in the menu. Planned optional upgrades for '08 include: "Save to USB hard drive," "Connect to network," and "Connect to PC."

² Via standard 3.5mm mini-jack. Works with any "closed contact" switch, e.g., a foot switch or endoscope trigger. Foot switch not included.

³ USB connectors on back panel of USB200 are for optional future upgrades. Contact MedicaCapture for details.
