

Patient Healthcare Solutions:

Keep your focus on patient care, not your waste

Where there is healthcare, there is biomedical waste. Whether in a traditional or non-traditional healthcare environment, sharps and red bag waste are necessary byproducts of providing quality care to your patients. However, disposing of these materials shouldn't interfere with your care - or impact your bottom line. Save money while safely, simply and securely processing your biomedical waste on-site with the Demolizer® II.

Deploy the unique Demolizer® II waste management system, the only solution of its kind that eliminates your cradle-to-grave liability right at your facility.

The safe, simple waste management solution

Using the Demolizer® II, you can properly dispose of your sharps and red bag waste with the touch of a button. A simple three-step operation efficiently processes this material into non-biohazardous waste that is safe for the common trash. The technology meets CDC and EPA recommendations for treatment and is consistent with the requirements under the OSHA Bloodborne Pathogen Rule. The Demolizer® II is approved or meets requirements for treatment in 46 states. This self-contained solution processes your biomedical waste cost-effectively, safely, simply, and securely.

Feel secure knowing liability concerns are a thing of the past

Whether you know it or not, you are responsible for your biomedical waste - even after it leaves your facility. Trusting the disposal of these materials to someone else can potentially result in a costly problem. Eliminate your liability by processing your sharps and red bag waste on site with the cost-effective Demolizer® II waste management system.

Demolizer[®] II Technology Specifications

Patient Care Solutions:

Physicians Offices | Dental Offices | Urgent Care Centers

Skilled Nursing Care Facilities | Public Health Clinics

Millions of patients are treated in clinical settings each day. These visits will generate more than 930 million pounds of biomedical waste annually in the U.S.¹ - from injection sharps to miscellaneous red bag waste. This equates to over three pounds of waste per person, per year. All of this waste needs to be handled and processed properly in accordance with federal, state, and local regulations to prevent accidental exposure to potentially infectious agents.

Traditional approaches to biomedical waste management involve either elaborate and expensive facility-based equipment or temporary on-site waste storage with subsequent third party hauling, off-site processing and disposal.

With the Demolizer[®] technology, health providers have a truly innovative solution to cost effective, safe, simple and secure biomedical waste management.

Compare the Options:

Low to Medium Processor	Demolizer [®] II Technology	Traditional Facility-Based Processing	Storage, Hauling and Off-Site Processing
Low Initial Investment	YES	NO	YES
Facility-Ready Operation <i>no fit-out required</i>	YES	NO*	YES
Automatic Documentation of Proper Disposal <i>elimination of cradle-to-grave liability risk</i>	YES	NO*	NO*
On-Site Immediate Disposal of Processed Waste <i>at point of generation</i>	YES	NO*	NO
On-Site Sharps and Red Bag Waste Processing** <i>at point of generation</i>	YES	NO*	NO
Automatic Compliance Documentation	YES	NO*	NO

¹ American Medical Association, December 1998

* Not typical, specifics vary by model and manufacturer

** Although not the case with the Demolizer[®] II, sharps usually require an additional, optional grinding or shredding operation for traditional facility-based processing technologies before they can be disposed as solid waste.
